

SanctuaryZone prevents  
the operator from being crushed

**NEW**

**Being crushed against overhead obstructions, resulting in death or serious injury, is one of the main hazards facing operators of Mobile Elevating Work Platforms (MEWPs).**

SanctuaryZone is a 'Tier 1 hierarchy of safety' steel structure that prevents the machine operator from being crushed.

Simple, strong and extremely reliable, SanctuaryZone projects above the machine platform to protect the operator from crushing which can lead to serious or worse still fatal injuries.

SanctuaryZone was designed, developed and constructed with the commitment of major powered access manufacturers who supported and approved the development.

Working closely with the HSE on the development, SanctuaryZone has been subjected to rigorous and exhaustive trialling.

SanctuaryZone is regarded as one of the most important safety developments in the powered access sector for many years.

“One of the most important  
developments in years..”

**NEW**

### SanctuaryZone evolution

- ⚙ WorkZone originated the design concept and produced the initial drawings of the SanctuaryZone prior to engaging the support and commitment of HSE and major machine manufacturers.
- ⚙ Successful field trials proved SanctuaryZone did not impair the operators' work. The trials also highlighted a number of refinements that influenced the ultimate design and improved safety still further e.g. modifying the angle of the steelwork to a gradual curve kept the safety netting away from the operator and prevented snagging.
- ⚙ Currently, SanctuaryZone frames are attached retrospectively to machines however WorkZone believes that in the future manufacturers may include them as an integral part of the machine's design.
- ⚙ And following the successful introduction of SanctuaryZone for boom lifts, WorkZone is working with major manufacturers to adapt SanctuaryZone and other safety devices for scissor lifts.

### SanctuaryZone benefits

- ⚙ Prevents crushing when working at height
- ⚙ Doesn't impede work activities
- ⚙ Works on all major manufacturers' machines
- ⚙ Fully adjustable
- ⚙ CE approved

CE marking is a mandatory safety conformity mark for products placed on the market in the European Economic Area

\* The visuals 1 - 3 are of a representative machine platform only.

Strong and robust frame weighing only 22kg

660mm high for optimal operator protection

Sacrificial steel structure protects operator and machine

Tamperproof security fixings stops unauthorised removal

Fully adjustable for easy fitting on or off site
