

BT-60F-400-4KT FASTEN TRACKER

LANYARD ATTACHMENT MONITORING SYSTEM

The BT-60F-400-4KT Fasten Tracker Lanyard Attachment Monitoring System is available for all MEWPs and will deliver an immediate reminder warning alarm to the lift operator if they are not safely attached to the designated anchor point prior to lift operation.

An optional feature can log data of Lift Operator activity such as lanyard attachments, detachments, lift motion activity and deliver safety violation notifications.

The GUARD Data Delivery module can then provide access to this data through Bluetooth for analysis on your laptop or phone.

The IPAF Global Safety Report, 2021 highlights that falls from height continues to be a leading cause of fatal accidents during MEWP operation.

Advantages:

- Verifies safety lanyard is attached to anchor point
- Delivers warning alarm reminder if operator is not attached with PPE prior to lift operation.
- Optional feature logs lift operator fall protection activity and will send safety violation notifications.
- Does not impede manufacturer functionality of MEWP
- Compatible on all MEWPs
