

# Harness ON™

## LANYARD ATTACHMENT MONITORING SYSTEM

To further improve operator safety, add Harness ON™ to your MEWP.

Harness ON™ is an intelligent anchor point that is permanently shackled to the MEWP's anchor point and is electronically wired to the machine's function controls.

Until the operator clips a carabiner to the inductive ring of the Harness ON™, effectively connecting their harness to the machine, the MEWP won't function.

It's an easy-to-use solution that doesn't affect the operator's work but has a big impact on safety. Moreover, Harness ON™ complies with EU and ANSI standards and is compatible with all machines!

The IPAF Global Safety Report, 2021 highlights that falls from height continues to be a leading cause of fatal accidents during MEWP operation.

## Advantages:

- Verifies safety lanyard is attached to anchor point
- Compatible with all types of harness and carabiner clips
- EU and ANSI safety compliant
- Prevents MEWP from being operated until Harness has been connected
